## SUMMARY

My experience combines a strong foundation in machine learning and deep learning concepts with hands-on work in building end-to-end AI and data-driven systems. I am comfortable moving from understanding algorithms to implementing, training, and evaluating models in practical settings.

## EDUCATION

**Ramakrishna Mission Residential College(Autonomous),Narendrapur**

BSc (Honours) in Mathematics, 2022–25  
CGPA –8.4

**Ramakrishna Mission Vivekananda Educational and Research Institute (RKMVERI)**

MSc in Data Science and Artificial Intelligence, 2025–27

CGPA –7.83(till Sem-1)

## SKILLS

- **Languages:** Python, C, R Programming, LaTeX
- **Frameworks:** OpenCV, Scikit-Learn, NumPy, Pandas, Streamlit, PyTorch, Matplotlib
- **Operating Systems:** Windows, Ubuntu Linux
- **Tools:** GitHub, Google Collab, Jupyter Notebook

## COURSE WORK

- Machine Learning, Deep Learning, LLM, Block Chain, Agentic AI
- Probability and Statistics, Linear Algebra, Time Series Analysis
- Distributed Computing, Data Structures and Algorithms

## ACHIEVEMENTS

- DST INSPIRE Scholarship(Top 1% of Board performers,Govt. of INDIA)
- AIR-667(JAM-Mathematics/2025)

## PROJECTS

**A Deep Learning Approach to prevent road accidents detecting Drivers' Drowsiness**

**RKMVERI**

Feb 2026 – Apr 2026

Developed a vision-based driver monitoring system using CNN, VGG16, CNN+LSTM, CNN+BiLSTM architectures on DDD Dataset. Implemented person-wise data splitting and temporal sequence modelling for robust evaluation, achieving best performance with CNN+LSTM(75.53% test accuracy and 0.847 ROC-AUC)

**Distributed QSA Using KAFKA**

**RKMVERI**

Feb 2026 – Apr 2026

Designed and implemented a distributed question-answering system using Apache KAFKA, where user queries are automatically classified into domain-specific topics (Mathematics, Physics, and Biology) using an LLM-based router. Built a producer-consumer architecture with Kafka topics and consumer groups, where specialized LLM services (Tynyllama, Llama 3, and Mistral) process domain-specific questions in parallel and return generated responses to a central server. The system enables scalable, asynchronous, and fault-tolerant QA through distributed message streaming and intelligent query routing.

**A Machine Learning Approach to Revenue Prediction and Quintessential Feature selection**

**RKMVERI**

Oct 2025– Dec 2025

Developed a machine learning pipeline for daily transport depot(S.B.S.T.C,Digha)revenue prediction using 2023 operational data. Compared regression, tree-based, and boosting models with multiple categorical encoding techniques, achieving the best performance with CatBoost ( $R^2 = 0.66$ ), and identified conductor, departure time, and route as key revenue-influencing features.
